Calling a WebService WebMethod using WebClient Class UploadStringAsync!!

Notice that if you're using WebClient, you really need to format the request just like the service expects it. If you want just to send the parameter, you should add a service reference to the service, and that will give you a class you can use to make simple calls.

How to convert 2 digit Year value to 4 digit with correct century in sql..

However, there will be a problem in cases like this: 18-Sep-01 (10-Sep-2001), that would be converted to: Sep 10, 1901 Marked as answer by Sravan_SQLFriday, February 3, 2017 10:58 AM

BulkLoad XSD schema - social.msdn.microsoft.com

I have used bulkload in the past, but now am having trouble. I have an XML file from an outside source (first part of file follows, along with my most recent xsd). I have been unable to create a valid schema for it. My current thought is that the element within a is a problem. If I'm right, I need help to figure a work around. If not, I need help figuring out the problem ...

GetCustomListTemplates returns 0 values

I have found following code to receive all CustomListTemplates automatically, but the count method returns always 0.

is sandbox down? - social.msdn.microsoft.com

The Sandbox appears to be running fine from both of our internal and external testing. If you are still experiencing difficulty, would you please pursue a support ticket through our standard escalation process? This will ensure that we can collect the necessary data to investigate your specific issue and will also help ensure faster resolution of your issue.

Invalid Dataset Referenced Field???

[rsInvalidDataSetReferenceField] The report parameter 'CrashVehicleVehicleType' uses the field 'ParameterValue' in a data set reference, but the data set 'CrashVehicleVehicleType' does not contain that field.
