windows - What does

`%date:~-4,4%%date:~-10,2%%date:~-7,2%_%time:~0,2% ...`

The above command line defines an environment variable with name `fileName` starting with fixed string `db_`, appending with `%date:~-4,4%` the last four characters of the current locale date which is obviously the year, appending with `%date:~-10,2%` the tenth and ninth characters from right side of the current locale date which is most likely the month,

DATE - Google

`DATE(1969,1,32)` 1 32 2/1/1969 Date 12.75 12

Delete all old emails after a certain date - Gmail Community

Delete all old emails after a certain date I have too many emails. How do I delete all those older than a certain date? I haven't tried anything because I can't keep selecting and deleting 10,000 old emails.

How do I query for all dates greater than a certain date in SQL Server ...

where `A.Date >= '2010-04-01'` it will do the conversion for you, but in my opinion it is less readable than explicitly converting to a `DateTime` for the maintenance programmer that will come after you.

.net - Is there a Date-only data type in C#? - Stack Overflow

I am working on a program that requires the date of an event to get returned. I am looking for a `Date`, not a `DateTime`. Is there a datatype that returns just the date?

How do I format a Microsoft JSON date? - Stack Overflow

`/Date(1224043200000)/` From someone totally new to JSON - How do I format this to a short date format? Should this be handled somewhere in the jQuery code? I've tried the `jQuery.UI.datepicker` plugin using `$.datepicker.formatDate()` without any success. FYI: Here's the solution I came up with using a combination of the answers here:

Pandas 'astype' with date (or datetime) - Stack Overflow

date If you want to cast into date, then you can first cast to `datetime64[ns]` and then use `dt.date` to get a column of `datetime.date` objects:

What is this date format? 2011-08-12T20:17:46.384Z

`Instant.parse ("2011-08-12T20:17:46.384Z")` ISO 8601 This format is defined by the sensible practical standard, ISO 8601. The T separates the date portion from the time-of-day portion. The Z on the end means UTC (that is, an offset-from-UTC of zero hours-minutes-seconds). The Z is pronounced "Zulu". `java.time` The old date-time classes bundled with the earliest versions of Java have proven ...

`date = new Date (); date.valueOf ()` vs `Date.now ()` - Stack Overflow

`new Date().getTime()` Functionally equivalent to `new Date().valueOf()` `Date.now()` Functionally equivalent to the 2 methods above As mentioned in the comments and MDN links, `Date.now()` is not supported in Internet Explorer 8. So if IE 8 compatibility is a concern you should use `new Date().valueOf()` at the cost of slightly diminished code readability.

Set the date, time & find your calendar - Chromebook Help

Set the date, time & find your calendar Your Chromebook automatically sets the time when you're connected to the web. Change your date & time preferences Sign in to your Chromebook. At the bottom right, select the time. Select Settings . Under "System preferences:" To manually choose your time zone, select Time zone Choose from list Down arrow .
