What is the difference between `` and `` tags?

Both of them emphasize text. The `` tag shows text as italics, whereas `` makes it bold. Is this the only difference?

What's the difference between `` and ``, and ?

While `` and `` are of course more semantically correct, there seem definite legitimate reasons to use the `` and `` tags for customer-written content.

E/M changes have led to more clinically meaningful documentation

Changes developed by the AMA and adopted by CMS to simplify E/M documentation have made these tasks more relevant, says physician survey.

¿Cuál es la diferencia entre las etiquetas HTML `` y `` entre ...

`` y ``, en cambio, marcan una diferencia en la fuerza o énfasis que se quiere dar a una palabra o frase sobre el texto completo. En un navegador tradicional la diferencia no se percibe, ya que las etiquetas `` y `` se estilizan como **b** e *i* respectivamente.

Billing Prolonged Services in 2024 - AAPC Knowledge Center

E/M code descriptor changes make it easier to know when it's time for an add-on code. Question: What impact did the CPT® 2024 evaluation and management E/M code descriptor changes make it easier to know when it's time for an add-on code.

How does `rem` differ from `em` in CSS? - Stack Overflow

While `em` is relative to the font-size of its direct or nearest parent, `rem` is only relative to the html (root) font-size. `em` gives the ability to control an area of a design. As in, scale the type in that specific area relatively. `rem` gives the ability to scale type across the entire page easily.

E/M experts offer CPT advice for physician private practices

Coding and documentation for evaluation and management (E/M) were made easier, but private practices still have questions on which codes to use.
