Fat - Wikipedia

In nutrition, biology, and chemistry, fat usually means any ester of fatty acids, or a mixture of such compounds, most commonly those that occur in living beings or in food. [1]

What Is Fat? Types & Why You Need Fats - Cleveland Clinic

The fats in your food don't automatically turn into body fat (adipose tissue). Your body only stores fat if you take in more calories from protein, carbs or fats than your body needs to burn for energy.

Fat | Definition, Types, Functions, Synthesis, & Uses | Britannica

fat, any substance of plant or animal origin that is nonvolatile, insoluble in water, and oily or greasy to the touch. Together with animal and vegetable oils, fats comprise one of the three principal classes of foodstuffs, the others being proteins and carbohydrates.

Types of Fat - The Nutrition Source

The American Heart Association suggests that 8-10 percent of daily calories should come from polyunsaturated fats, and there is evidence that eating more polyunsaturated fat—up to 15 percent of daily calories—in place of saturated fat can lower heart disease risk.

Fats in Foods - American Heart Association

Fats that are found in our foods can be part of a healthy diet. Fats are essential to our health, including giving us energy and helping our body absorb vitamins. Different types of fats also can have different effects on the cholesterol levels in your body. Unhealthy Fats: Saturated and Trans Fats The American Heart Association recommends limiting saturated fats and avoiding trans fats. The ...

What are Healthy Fats and Why Do You Need Fat in Your Diet?

Get to know the different types of fat, what they do, which ones are healthy fats, and which foods are good sources of healthy fats.

Types of fat: The good and the bad - Medical News Today

When it comes to health, not all fats are equal. This article looks at the sources and types of fat, their effects on the body, and how much to add to the diet.

Fats | Nutrition.gov
