Dell Command Update 5.5.0 will not install (Resolved)

Have been having the same issue on new Dell systems that are being re-imaged prior to deployment. Taking Amuro_Ray's suggestion was successful. Install failed, added .NET Runtime (not Desktop version) 8.0 and then immediately began the installation again, and that was successful. Thanks for the tip!

Error Your Dock Fan Has Failed | Dell US

The following article provides information about dealing with a failure message for the dock fan received on WD19 and WD22 docks.

Move the Client to another Grid - failed | DELL Technologies

My understanding how this works is the backups only are moved when you initiate the move via client manager without a way to view the process of the movement. I'm sure there is a process running on the Avamar grid with a log file. The client doesn't activate automatically to the destination grid after the move is complete. You may have to do this manually. If you do it manually check the ...

Software updates failed | DELL Technologies

In Dell SupportAssist "Check for software updates" After 5 seconds the message appears : "Software updates failed" and that's been going on for a month

Update failed from 5.22.00.18 to 5.26.00.20 | DELL Technologies

Hi I'm trying to update from 5.22.00.18 to 5.26.00.20 and failed with message Update failed. Something went wrong while updating this gateway to latest version. Please try again later. In Applicati...

SupportAssist - installation failed message. | DELL

Technologies

SupportAssist - installation failed message. When opening SA today I was greeted with an update prompt. I went along with the update, however, it went no further than "downloading and starting up files", at which point the percentage bar went up to 100%, then gave me the error: "Installation failed - We were unable to complete the installation."
