Gastritis - Symptoms and causes - Mayo Clinic

Gastritis is an inflammation of the stomach lining. The stomach lining is a mucus-lined barrier that protects the stomach wall. Weaknesses or injury to the barrier allows digestive juices to damage and inflame the stomach lining. Several diseases and conditions can increase the risk of gastritis.

Gastritis: What It Is, Symptoms, Causes & Treatment

What is gastritis? Gastritis is inflammation in the lining of your stomach. This lining (a soft tissue called mucosa) protects your stomach from the acids, enzymes and microorganisms that pass through it every day. Gastritis happens when your immune system detects a threat to this barrier.

Gastritis - Johns Hopkins Medicine

Gastritis is when your stomach lining gets red and swollen (inflamed). Your stomach lining is strong. In most cases acid does not hurt it. But it can get inflamed and irritated if you drink too much alcohol, eat spicy foods, or smoke.
