Difference between := and = operators in Go - Stack Overflow

What is the difference between the `=` and `:=` operators, and what are the use cases for them? They both seem to be for an assignment?

go - What is the meaning of '*' and '&'? - Stack Overflow

Golang does not allow pointer-arithmetic (arrays do not decay to pointers) and insecure casting. All downcasts will be checked using the runtime-type of the variable and either panic or return false as second return-value when the instance is of the wrong type, depending on whether you actually take the second return type or not.

Go > operators - Stack Overflow

Go's > are similar to shifts (that is: division or multiplication by a power of 2) in other languages, but

because Go is a safer language than C/C++ it does some extra work when the shift count is a number. Shift instructions in x86 CPUs consider only 5 bits (6 bits on 64-bit x86 CPUs) of the shift count. In languages like C/C++, the shift operator translates into a single CPU ...

What is the difference between []string and ...string in golang?

@StephenWeinberg: Yes, my "nothing really" answer to the "what's the difference" quote is answering the question that was asked about the difference between the slice generated by the variadic function parameter, and the one created using the []string syntax. I'll add more of the quote to my answer to make it clearer. :-)
