## Geometry lessons - School Yourself

Essential stuff for describing the world around you. 1. Lines and angles. 2. Related angles. What about angles bigger than 360 degrees? 3. Triangles. See if it's really true, and then prove it! They have two equal sides, but what about their angles? In triangles, sides and their opposite angles are related! 4. Triangle congruence and similarity.

## Geometry - GeoGebra

Interactive, free online geometry tool from GeoGebra: create triangles, circles, angles, transformations and much more!

## Geometry | Definition, History, Basics, Branches, & Facts | Britannica

Geometry, the branch of mathematics concerned with the shape of individual objects, spatial relationships among various objects, and the properties of surrounding space.

## Geometry - Math is Fun

Geometry is all about shapes and their properties. If you like playing with objects, or like drawing, then geometry is for you!

## Geometry - Formulas, Examples | Plane and Solid Geometry - Cuemath

Two types of geometry are plane geometry and solid geometry. Plane geometry deals with two-dimensional shapes and planes (x-axis and y-axis), while solid geometry deals with three-dimensional objects and 3D planes.

## **Basic Geometry**

Geometry is the branch of mathematics that deals with the study of points, lines, angles, surfaces, and solids. Understanding these fundamental concepts lays the foundation for exploring more advanced topics in geometry.

## **Geometry - Math.net**

Geometry is a branch of mathematics that includes the study of shape, size, and other properties of figures. It is one of the oldest branches of mathematics and may have been used even in prehistoric times.

## **What Is Geometry in Math? Definition, Solved Examples, Facts**

Geometry is a branch of mathematics that deals with shapes, sizes, angles, and dimensions of objects. Explore 2D and 3D shapes, angles in geometry with examples!
