Understanding .get () method in Python - Stack Overflow

Here the get method finds a key entry for 'e' and finds its value which is 1. We add this to the other 1 in characters.get (character, 0) + 1 and get 2 as result.

How to make an HTTP get request with parameters - Stack Overflow

Is it possible to pass parameters with an HTTP get request? If so, how should I then do it? I have found an HTTP post request (link). In that example the string postData is sent to a webserver. I wo...

Understanding dictionary.get in Python - Stack Overflow

What is confusing you? You evidently know what .get invoked on a dictionary does, that's what's being called for each key in the dictionary.

What is the "get" keyword before a function in a class?

The 'get' lets you treat a class method, as if it were a simple property in an object. If you leave off the 'get', you can still access the value by calling .area () instead of just .area

javascript - ajax jquery simple get request - Stack Overflow

ajax jquery simple get request Asked 13 years, 11 months ago Modified 6 years, 5 months ago Viewed 264k times

Get the values from the "GET" parameters (JavaScript)

Get the values from the "GET" parameters (JavaScript) [duplicate] Asked 16 years, 7 months ago Modified 3 years, 5 months ago Viewed 2.9m times

Why doesn't list have safe "get" method like dictionary?

Ultimately it probably doesn't have a safe .get method because a dict is an associative collection (values are associated with names) where it is inefficient to check if a key is present (and return its value) without throwing an exception, while it is super trivial to avoid exceptions accessing list elements (as the len method is very fast). The .get method allows you to query the value ...

python - What does request.GET.get mean? - Stack Overflow

11 request.GET is the dictionary of the GET variables in the http request made to your server for example:

What is the { get; set; } syntax in C#? - Stack Overflow

The get/set pattern provides a structure that allows logic to be added during the setting ('set') or retrieval ('get') of a property instance of an instantiated class, which can be useful when some instantiation logic is required for the property.

SSL: CERTIFICATE_VERIFY_FAILED certificate verify failed: unable to get ...

When I try to install a python module or execute a script I get the following error: [SSL: CERTIFICATE_VERIFY_FAILED] certificate verify failed: unable to get local issuer certificate (_ssl.c:1129) I've verified that the certificate in the environment path is defined so, besides that, I'm not sure what else to use to troubleshoot the issue.
