В чем разница между файлами с расширениями .h и .hpp в C++? Что лучше использовать?

The .h files are used to expose the API of a program to either other part of that program or other program is you are creating a library. For example, the program PizzaDelivery could have 1 .c file with the main program, and 1 .c file with utility functions.

A A “AcFun” 2007 6 Anime Comic Fun A

O .h ou .hpp conceitualmente são arquivos de cabeçalho e possuem códigos que o compilador precisa para compilar outras partes. Em geral ali contém apenas as estruturas de dados (classes por exemplo) com as assinaturas de métodos e funções, além de implementações que devem ser linearizadas ou gabaritadas.

I've always used a *.h file for my class definitions, but after reading some boost library code, I realised they all use *.hpp. I've always had an aversion to that file extension, I think mainly be...
