How can I run a diagnostic check on my Windows 7 to see if it is ...

How can I run a diagnostic check on my Windows 7 to see if it is functioning correctly? My computer displayed the blue screen twice while I was on SKYPE. I did a diagnostic run on my hard drive and nothing showed to explain a blue screen caused by my hard drive. I have Kaspersky security.

Windows 10 reboots with Error - Microsoft Community

Method 2 Check if the Hard disk is detected in the BIOS and set as primary boot device. You can refer the computer manual to boot into BIOS and change primary boot device. Note: Modifying BIOS/ complementary metal oxide semiconductor (CMOS) settings incorrectly can cause serious problems that may prevent your computer from booting properly.

Spell Check in 2016 Word is Really Slow - Microsoft Community

Hi, Let us check in Word Safe Mode if spell-check works normally. To do that, close Word. Let us type in 'Run' in the search bar next to start button, click on the 'run' icon that appears - in the 'Run window' type in WinWord /safe and hit ok. (Note: There is a space between WinWord and /). If the application works fine safe mode, try disabling the add ins for the application and check ...

PXE-E61 Media Test Failure Problem - Microsoft Community

After, I reopen it and this message appeared: PXE-E61: Media Test Failure, check cable PXE-M0F: Exiting Brodcom PXE ROM I don't know what to do so I shut it down again and remove the external drives (the cd and a flash drive). Then after a few hours, I reopen it then it loads my system. After few hours of use, the blue screen appeared again.
