## What exactly does the .join () method do? - Stack Overflow

I'm pretty new to Python and am completely confused by .join() which I have read is the preferred method for concatenating strings. I tried: `strid = repr(595) print array.array('c', random.sample(`

## Using .join() in Python - Stack Overflow

Here you are using two joins - the inner join joins every element up until the second to last element with a comma. That string is then joined to the last element (`a[-1]`) using the outer join, which is `and`.

## Qual é a diferença entre INNER JOIN e OUTER JOIN?

Inner join faz uma junção entre duas tabelas A e B onde a projeção serão todos os elementos de A que estão em B. Ex.: Quero todos os clientes de um banco e suas determinadas agencias: `select * from Clientes inner join Agencias on Cliente.idAgencia = Agencias.idAgencia` Um outer join pode ser Left, Right e Center (ou Cross). Um left join faz uma junção entre A e B onde a projeção ...

## What's the difference between INNER JOIN, LEFT JOIN, RIGHT JOIN and ...

INNER JOIN gets all records that are common between both tables based on the supplied ON clause. LEFT JOIN gets all records from the LEFT linked and the related record from the right table ,but if you have selected some columns from the RIGHT table, if there is no related records, these columns will contain NULL.

## What is the difference between JOIN and INNER JOIN?

The fact that when it says INNER JOIN, you can be sure of what it does and that it's supposed to be just that, whereas a plain JOIN will leave you, or someone else, wondering what the standard said about the implementation and was the INNER/OUTER/LEFT left out by accident or by purpose.

## ¿Cuál es la diferencia entre un inner y un outer join?

Asumiendo que se está haciendo un join de columnas sin duplicados, lo cuál es un caso común: Un inner join de A y B entregará el resultado de la intersección de los conjuntos A y B. En otras palabras, la parte interna -intersección- en un diagrama de Venn.

## LEFT JOIN vs. LEFT OUTER JOIN in SQL Server - Stack Overflow

Left Join and Left Outer Join are one and the same. The former is the shorthand for the latter. The same can be said about the Right Join and Right Outer Join relationship. The demonstration will

illustrate the equality. Working examples of each query have been provided via SQL Fiddle. This tool will allow for hands on manipulation of the query. Given Left Join and Left Outer Join Results

## **SQL JOIN where to place the WHERE condition? - Stack Overflow**

If a filter enters in a JOIN condition functionally (i.e. it is an actual join condition, not just a filter), it must appear in the ON clause of that join. Worth noting: If you place it in the WHERE clause instead, the performances are the same if the join is INNER, otherwise it differs. As mentioned in the comments it does not really matter since anyway the outcome is different. Placing the ...

## **sql - Using AND in an INNER JOIN - Stack Overflow**

INNER JOIN TABLE B B1 -- You are inner joining Table A and B. Again, B1 is just a nickname. Here is a good picture explaining joins. ON B1.ID = A1.ID -- This is the column that the 2 tables have in common (the relationship column) These need to contain the same data. AND A1 = 'TASK' -- This is saying you are joining where A1 tablename

## **sql - В чем разница между left join и right join? - Stack Overflow на ...**

Прочитал теорию, попробовал. LEFT JOIN Выбирает из первой таблицы все записи и присоединяет к ним записи из второй таблицы, по указанным для сравнения колонкам. Если не находит, то присоединяет null.
