What is Hydrochloride or HCL in a drugname? - Drugs.com

I looked up my pills and found 2 names for the identical pill one was "oxycodone" and one was "oxycodone hydrochloride" what is the difference? Some drugs require a salt to be added to them to ensure that they can dissolve in the stomach or be absorbed into the bloodstream. Sometimes salts make medicine more stable so that it has a longer shelf life. More than 50% of all available medicines ...

Hydroxyzine Pamoate vs HCl: What's the difference? - Drugs.com

Hydroxyzine pamoate and hydroxyzine HCl both deliver the same active drug, hydroxyzine, so their clinical effects (such as sedation, itch relief, and anxiety reduction) are broadly similar. The main difference is the salt form (pamoate vs hydrochloride), which influences how the medicine is formulated. What Is Hydroxyzine Pamoate?

What does "HCL" stand for after the drug name? - Drugs.com

HCL (acid) is the hydrochloride form but more importantly the answer you seek concerns "is the acid form best for your application" HCL is the converted form of many compounds for shelf life extension and durability. HCL's are actually poor versions of their former self.

Hydroxyzine - Differences between HCl vs. pamoate?

Hydroxyzine HCl is available as tablets, syrup, and solution for injection, while hydroxyzine pamoate is only available as capsules. There's no clinical difference between the two, so the choice often comes down to preference for dosage form and cost." I don't know if there's a difference in onset and duration.
