## IR - 1

IR 1 is a measure of the correlation between the returns of two assets. It ranges from -1 to 1, where 1 indicates a perfect positive correlation and -1 indicates a perfect negative correlation. The formula for calculating IR 1 is:

## IR? - 1

IR 1 is a measure of the correlation between the returns of two assets. It ranges from -1 to 1, where 1 indicates a perfect positive correlation and -1 indicates a perfect negative correlation. The formula for calculating IR 1 is:

## AI IR - 1

AI IR is a measure of the correlation between the returns of two assets. It ranges from -1 to 1, where 1 indicates a perfect positive correlation and -1 indicates a perfect negative correlation. The formula for calculating AI IR is:

## Informational Ratio - 1

IR = 2 (1 - 1) / (1 + 1) Residual Return/Risk Active  
Return/Risk 1 Grinold & Kahn "Residual Risk and Return: The Information Ratio"

## IR - 1

IR 1 is a measure of the correlation between the returns of two assets. It ranges from -1 to 1, where 1 indicates a perfect positive correlation and -1 indicates a perfect negative correlation. The formula for calculating IR 1 is:

## llvm ir llvm api? - 1

SSA`ud` `du` LLVM`IR``du` `open64`  
`phase``du` LLVM`ud``du`

## IR - 1

100 IR 1 is a measure of the correlation between the returns of two assets. It ranges from -1 to 1, where 1 indicates a perfect positive correlation and -1 indicates a perfect negative correlation. The formula for calculating IR 1 is:

## LLVM IR - 1

LLVM IR 1 is a measure of the correlation between the returns of two assets. It ranges from -1 to 1, where 1 indicates a perfect positive correlation and -1 indicates a perfect negative correlation. The formula for calculating LLVM IR 1 is:
