## User principal name vs SAM account name - Server Fault

I am confused between the user principal name (UPN) and SAM account name (SAM). Heres what i know SAM- Pre-windows name, for backward compatibility with Windows NT machines etc. DOMAIN/USERA, look...

## windows - Resolve host name from IP address - Server Fault

I'm looking for a command line tool which gets an IP address and returns the host name, for Windows.

## windows - Current date in the file name - Server Fault

I have scheduled backup script that makes the database dump. How can I add the date timestamp to the file name? I am talking about Windows and CMD.

## Temporary failure in name resolution - Server Fault

Temporary failure in name resolution : Host name lookup failure [closed] Ask Question Asked 16 years, 7 months ago Modified 5 years, 5 months ago

## Can someone please explain Windows Service Principle Names (SPNs ...

A Service Principal Name is a concept from Kerberos. It's an identifier for a particular service offered by a particular host within an authentication domain. The common form for SPNs is service class / fqdn @ REALM (e.g. IMAP/ mail.example.com@EXAMPLE.COM). There are also User Principal Names which identify users, in form of user @ REALM (or user1 / user2 @ REALM, which identifies a speaks ...

## Active Directory Domain where FQDN and NetBIOS name are the same

2 I have "inherited" an ancient domain (NT4, then upgraded to Win2000 Mixed Mode and now running on Win2003) where the NetBIOS name coincides with the DNS/FQDN one, and this is giving us problems with remote clients which need to be joined to the domain.

## How can I configure my DNS settings on Debian 12?

I'm trying to change my DNS settings on my Debian 12 VPS, and by this I mean, I want to use a public resolver like 1.1.1.1 instead of my VPS host's resolver. I remember in Debian 11 I could just ed...

## **Difference between DHCP options 'Domain-Name' and 'Domain-Search'**

The domain-name option specifies the client's domain name (of which there can only be one), and is specified in resolv.conf with the domain keyword. This is the domain which will be used when running `hostname -f` on the client. The domain-search option specifies a list of domains to use when looking up bare hostnames, and is specified in resolv.conf with the search keyword. If this option isn't ...

## **Store file in zip archive with different name (linux command shell)**

15 In a linux command line, you zip a file by: `zip -mqj archive.zip file.txt` Now, I need to store 'file.txt' as 'file2.txt' in 'archive.zip', without renaming the file before zipping. When unzipped, the file should be called 'file2.txt'. How can I store the file with a different name? Read through the MAN page and didn't find an answer.

## **Windows computer Name -> IP resolution on iphone?**

Like Farseeker says, the issue is that what you call "computer names" are actually NetBIOS names. NetBIOS is a protocol of Sytek/IBM's own invention, which has been superceded by a naming service like DNS, so it is generally not supported on non-Windows machines. Linux and Unix machines can use NetBIOS through a thrid-party client called SAMBA, but the iPhone doesn't run SAMBA. Ultimately, you ...
