python - What exactly does "import *" import? - Stack Overflow

In Python, what exactly does `import * import`? Does it import `__init__.py` found in the containing folder? For example, is it necessary to declare `from project.model import __init__`, or is from `proj...`

python - `from ... import` vs `import .` - Stack Overflow

272 Many people have already explained about `import` vs `from`, so I want to try to explain a bit more under the hood, where the actual difference lies. First of all, let me explain exactly what the basic `import` statements do. `import X` Imports the module X, and creates a reference to that module in the current namespace.

python - Why is "import *" bad? - Stack Overflow

It is recommended to not to use `import *` in Python. Can anyone please share the reason for that, so that I can avoid it doing next time?

What does the @ symbol do in javascript imports? - Stack Overflow

First you need to add `babel-plugin-root-import` in your `devDependencies` in `package.json` (If using `yarn`: `yarn add babel-plugin-root-import --dev`). Then in your `.babelrc` add the following lines into `plugins` key:

from ... import OR import ... as for modules - Stack Overflow

Should I use `from foo import bar` OR `import foo.bar as bar` when importing a module and there is no need/wish for changing the name (`bar`)? Are there any differences? Does it matter?

javascript - What is 'import as'? - Stack Overflow

`import { BrowserRouter as Router, Route, Switch } from 'react-router-dom'` What is the relationship between `Router`, `Route`, `Switch` and `BrowserRouter`? Is this a form of destructuring? If so, I thought destructuring was done using the following syntax:

Best way to include CSS? Why use @import? - Stack Overflow

This Stack Overflow thread discusses the best practices for including CSS and the reasons to use `@import` in web development.

What does the @ mean inside an import path? - Stack Overflow

```
import Vue from 'vue' import Router from 'vue-router' import Hello from '@components/Hello' //
```

python - from . import * from module - Stack Overflow

If the import module in the other subdir, use e.g: `from ..other import core` Note: Starting with Python 2.5, in addition to the implicit relative imports, you can write explicit relative imports with the `from module import name` form of import statement.

python - How to use the `__import__` function to import a name from a ...

32 You should use `importlib.import_module`, `__import__` is not advised outside the interpreter. In `__import__`'s docstring: Import a module. Because this function is meant for use by the Python interpreter and not for general use it is better to use `importlib.import_module()` to programmatically import a module. It also supports relative imports.
