## 10 inch trim / slab saw choices

Hello, I have been using an Inland all in wonder for a bit now (but still new) and have saved up some money for a cabbng machine and a saw, while I found lots of info on various cabbng machines I have found little information on trim/slab saw units.

## Art In Stone - Cutting, sanding and polishing Jade tutorial

Art In Stone - Cutting, sanding and polishing Jade tutorial The problems arise with lower quality Jade. These usually show indications such as "chips" along already cut edges and in lines in the Jade running like the grain in a piece of wood. If you have a Jade piece with lines in it you need to cut with the length run of the grain. If you cut across the grain the Jade will crumble. You also ...

## Highland park - lapidaryforum.net

I also run the lapidary shop for our rock club, which has five saws- a brand new (12 months) Highland Park 14 auto feed, an old Lortone 14in., another older Highland park 18in. and a couple trim saws.

## Cutting lubricant for slab saws

Cutting lubricant for slab saws I am by no means an expert.... What weight/viscosity was the gearbox oil? From what I've seen is that saw oil seems to be on the thin side. I have seen many experts recommend food grade mineral oil. I just looked, and from what I could find that mineral oil is about a 70 viscosity. Seems kind of thick to me. Logged

## **Hydraulic Fluid Great Western Lapidary Equipment Co. Saws**

I was looking for some info on maintenance of the hydraulic feed for Great Western Lapidary Equipment Co. saws. How often do you have to add hydraulic fluid and what kind do you use? The 24" I picked up is hydraulic. I was thinking of switching over to mineral based/vegetable based biodegradable hydraulic fluid and looking for other options.

## **Old Poly Products Lapidary Unit**

Old Poly Products Lapidary Unit Those bump wheels need to go. New expando drums are the way to go and the polishing pad on the end is fairly useless in reality. A unit with two expando wheels that are easy to change the belts is a fine way to go. Slash guards can be made or bought and you will need a water drip system . A third horse motor is also fine You may want to jury rig a belt guard ...
