Light - Wikipedia

The main source of natural light on Earth is the Sun. Historically, another important source of light for humans has been fire, from ancient campfires to modern kerosene lamps. With the development of electric lights and power systems, electric lighting has effectively replaced firelight.

Light | Definition, Properties, Physics, Characteristics, Types

...

Light is electromagnetic radiation that can be detected by the human eye. Electromagnetic radiation occurs over an extremely wide range of wavelengths, from gamma rays with wavelengths less than about 1×10^{-11} metres to radio waves measured in metres.

LIGHT Definition & Meaning - Merriam-Webster

The meaning of LIGHT is something that makes vision possible. How to use light in a sentence. Synonym Discussion of Light.

How Light Works - HowStuffWorks

But what exactly is light? We catch glimpses of its nature when a sunbeam angles through a dust-filled room, when a rainbow appears after a storm or when a drinking straw in a glass of water looks disjointed.

Light - Learn Physics

Light is a type of energy that enables us to see with our eyes. Light travels from a source, like the sun or a light bulb, to our eyes, and to the surroundings. That is the reason we can see objects during daytime with the sunlight, or with a light bulb in the night.

What is light? - BBC Sky at Night Magazine

What is light, what are the different types of light and how does light behave? A history of discoveries has led us to see more clearly.

What is Light? - Las Cumbres Observatory

Light is just one form of electromagnetic radiation, or electromagnetic waves. These waves are all around us and come in many sizes. The largest electromagnetic waves, with wavelengths from a few centimeters to over 100 meters are called radio waves.
