Northern Mockingbird Identification, All About Birds, Cornell ...

Mockingbirds have small heads, a long, thin bill with a hint of a downward curve, and long legs. Their wings are short, rounded, and broad, making the tail seem particularly long in flight. Mockingbirds are overall gray-brown, paler on the breast and belly, with two white wingbars on each wing.

22 Interesting Facts About Mockingbirds - Bird Feeder Hub

There are at least 16 mockingbird species that exist in the world. Although North America is only home to the Northern Mockingbird, there are several different mockingbird species that live within South America.

Northern Mockingbird | Audubon Field Guide

The male Northern Mockingbird sings to defend territory and attract a mate, often leaping a few feet in the air and flapping his wings while singing. The early stage of courtship involves the male and female chasing each other rapidly around the territory.

Mockingbird - Description, Habitat, Image, Diet, and ...

The Northern Mockingbird, a familiar sight and sound across much of North America, is far more than just a pretty face and a talented mimic. This adaptable bird boasts a complex life history, a significant ecological role, and a surprisingly rich connection to human culture.

Mockingbird | Songbird, Mimicry, Nocturnal | Britannica

Mockingbird, any of several versatile songbirds of the New World family *Mimidae* (order *Passeriformes*). The common, or northern, mockingbird (*Mimus polyglottos*) is well known as a mimic; it has been known to imitate the songs of 20 or more species within 10 minutes.
