Monkey - Wikipedia

Monkey is a common name that may refer to most mammals of the infraorder Simiiformes, also known as simians. Traditionally, all animals in the group now known as simians are counted as monkeys except the apes.

Monkey | Definition, Characteristics, Types, Classification, & Facts ...

Monkey, in general, any of nearly 200 species of tailed primate, with the exception of lemurs, tarsiers, and lorises. The presence of a tail (even if only a tiny nub), along with their narrow-chested bodies and other features of the skeleton, distinguishes monkeys from apes.

Monkey - San Diego Zoo Animals & Plants

Old World monkeys are found in Africa and Asia. They include guenons, mangabeys, macaques, baboons, and colobus monkeys. New World monkeys live in Mexico, Central America, and South America. Some examples are woolly monkeys, spider monkeys, howler monkeys, capuchin monkeys, and squirrel monkeys.

Monkeys | Nature | PBS

Monkeys Simiiformes A monkey is a primate of the Haplorrhini suborder and simian infraorder, either an Old World monkey or a New World monkey, but excluding apes and humans.

Monkey facts | Mammals - BBC Earth

However, not everything that looks like a monkey is a monkey. You see, “monkey” is not a very scientific term, and actually refers to most members of a group of mammals called simiiformes.
