Soft-NMS - 1

Soft-NMS is a NMS algorithm that allows for soft assignment of boxes to classes. It is based on the Soft-NMS algorithm proposed in the paper "Soft-NMS: Soft Assignment of Boxes to Classes" by Zhang et al. (2020). The algorithm uses a soft assignment function to assign boxes to classes based on their IoU with the highest scoring box. The assignment function is defined as follows:

Soft-NMS - 2

nms is a function that takes a list of boxes and scores and returns the top k boxes. It is based on the Soft-NMS algorithm proposed in the paper "Soft-NMS: Soft Assignment of Boxes to Classes" by Zhang et al. (2020). The function is defined as follows:

One to many assign NMS Strikes Back DETR

one-to-many label assignment + NMS is a new DETR architecture. It is based on the Group DETR architecture proposed in the paper "Group DETR: Group-wise Label Assignment and NMS" by Zhang et al. (2021). The architecture is defined as follows:

Traditional NMS vs Diou-NMS

Traditional NMS is a NMS algorithm that uses the Intersection over Union (IoU) metric to assign boxes to classes. It is based on the NMS algorithm proposed in the paper "Non-Maximum Suppression" by Nissley et al. (1989). The algorithm is defined as follows:

DETR NMS - 1

DETR is a NMS algorithm that uses the DETR architecture. It is based on the DETR architecture proposed in the paper "DETR: End-to-End Object Detection with Transformers" by Dehghani et al. (2021). The architecture is defined as follows:

DETR NMS - 2

NMS is a NMS algorithm that uses the NMS algorithm. It is based on the NMS algorithm proposed in the paper "Non-Maximum Suppression" by Nissley et al. (1989). The algorithm is defined as follows:

torchvision nms - 1

_C = _lazy_import() return _C.nms(boxes, scores, iou_threshold) is a function that takes a list of boxes and scores and returns the top k boxes. It is based on the NMS algorithm proposed in the paper "Non-Maximum Suppression" by Nissley et al. (1989). The function is defined as follows:

yolov5 merge-nms - 1

NMS is a NMS algorithm that uses the NMS algorithm. It is based on the NMS algorithm proposed in the paper "Non-Maximum Suppression" by Nissley et al. (1989). The algorithm is defined as follows:

torchvision nms - 2

NMS is a NMS algorithm that uses the NMS algorithm. It is based on the NMS algorithm proposed in the paper "Non-Maximum Suppression" by Nissley et al. (1989). The algorithm is defined as follows:
