Wood Suppliers Near Phoenix Arizona - LumberJocks Woodworking Forum

For people near Chino California the National Wood Products is your local supplier of hardwood plywood in Los Angeles, Chino, Riverside, and all other areas of Southern California. We have both domestic and import hardwoods in a variety of species, grades, and types.

No-void plywood - LumberJocks Woodworking Forum

The plywood with 1/16" or whatever inner plys should in theory be void free I think because they put patches in the knot areas but delaminations occur randomly and that's luck of the draw.

Are dowels affective in plywood? - LumberJocks Woodworking Forum

I was wondering, are dowels affective in plywood? I am mildly confused due to the fact that the grain direction alternates every layer. Gluing plywood together is essentially gluing a surface which is partially side grain and also partially end grain. I am building a dresser and plan to use...

Kitchen drawer boxes (plywood) what joint to use?

I've used a dado/rabbit type joint on numerous plywood drawer boxes with good results. I used a router table in the past but find the table saw to be much faster.

Safest Way to Connect 1/2" Plywood Joints - LumberJocks Woodworking Forum

I'm building a cabinet and this one section requires me to screw directly into a 1/2" plywood joint. I know that I'm mostly safe pre-drilling a hole that's hopefully straight but was curious what you guys recommend in this scenario to connect a clean 1/2" joint. This seam runs about 7 feet in...

Butt-jointing plywood with glue and screws - LumberJocks Woodworking Forum

I need to butt-joint two pieces of plywood with glue and screws. Will plywood tolerate having a screw driven into its edge (even with a pilot hole), or will the plywood split? What about butt-jointing normal wood, with the screw driven into end grain? How well will that hold up?

Drilling holes in plywood - LumberJocks Woodworking Forum

I am building a model railroad and need to drill holes through the plywood top for wires. I've tried straight twist bits, forstener bits, spade bits and brad point bits, but they all leave tear out on the exit side of the plywood. This interferes with wires and plugs being fed through the hole...

Pro's and Con's of 2x4 frame vs plywood miter...

Plywood cabinets will be strong enough if built properly. The cool thing about boxes is the whole is stronger than the sum of its parts. 2x4s will make it heavier and more expensive, but simpler to build.

What Size Plywood for Walls? - LumberJocks Woodworking Forum

I like the natural plywood cover too, but, and even with the walls covered, painting them white really helped brighten the shop, both for appearance and for viability.

Optimal Use Plywood for Cabinets - LumberJocks Woodworking Forum

Putting a back with 1/4" plywood. Just need to know best use of 3/4" full sheet for base cabinet 2-sides, 1-bottom, 3 stretchers (1 for drawer separation, 2 nailers.
