What is a router? | Router definition | Cloudflare

A router is a device that connects two or more packet-switched networks. Routers forward packets and allow multiple devices to use the same Internet connection.

Router (computing) - Wikipedia

Routers perform the traffic directing functions on the Internet. A router is connected to two or more data lines from different IP networks. When a data packet comes in on a line, the router reads the network address information in the packet header to determine the ultimate destination.
