Routing (Symfony Docs)

When your application receives a request, it calls a controller action to generate the response. The routing configuration defines which action to run for each incoming URL. It also provides other useful features, like generating SEO-friendly URLs (e.g. /read/intro-to-symfony instead of index.php?article_id=57).

Scheduler (Symfony Docs)

The scheduler component manages task scheduling within your PHP application, like running a task each night at 3 AM, every two weeks except for holidays or any other custom schedule you might need. This component is useful to schedule tasks like maintenance (database cleanup, cache clearing, etc.), background processing (queue handling, data synchronization, etc.), periodic data updates ...
