Iron - Wikipedia

Chemically, the most common oxidation states of iron are iron (II) and iron (III). Iron shares many properties with other transition metals, including the other group 8 elements, ruthenium and osmium. Iron forms compounds in a wide range of oxidation states, -2 to $+7$.

Iron - Uses, Side Effects, and More - WebMD

Most of the iron in the body is found in red blood cells and muscle cells. Food sources include meat, fish, beans, spinach, and cereal. Iron helps red blood cells carry oxygen from the lungs to...

Iron | Element, Occurrence, Uses, Properties, & Compounds | Britannica

Iron (Fe), chemical element and one of the transition elements, the most-used and cheapest metal. Iron makes up 5 percent of Earth's crust and is second in abundance to aluminum among the metals.

Iron: What It Is and Health Benefits

Iron is a key component to making sure that your body has oxygen-rich blood. That's important for your brain, immune system and more.

Iron - The Nutrition Source

Iron is important for healthy brain development and growth in children, and for the normal production and function of various cells and hormones. Iron from food comes in two forms: heme and non-heme. Heme is found only in animal flesh like meat, poultry, and seafood.

IRON Definition & Meaning - Merriam-Webster

The meaning of IRON is a silver-white malleable ductile magnetic heavy metallic element that readily rusts in moist air, occurs in pure form in meteorites and combined in most igneous rocks, is the most abundant element on Earth by mass, and is vital to biological processes.

Iron - Consumer - Office of Dietary Supplements (ODS)

Iron helps make hemoglobin in red blood cells. Learn how much you need, good sources, deficiency symptoms, and health effects here.

Iron - Element information, properties and uses | Periodic Table

Element Iron (Fe), Group 8, Atomic Number 26, d-block, Mass 55.845. Sources, facts, uses, scarcity (SRI), podcasts, alchemical symbols, videos and images.

Iron - Simple English Wikipedia, the free encyclopedia

Iron is the main ingredient used to make steel. Raw iron is magnetic (attracted to magnets), and its compound magnetite is permanently magnetic. In some regions iron was used around 1200 BCE. That event is considered the transition from Bronze Age to Iron Age. Iron is a grey, silvery metal.
