## **What Is Vision? Definition, How It Works, Factors That Affect Visual ...**

What Is Vision? Vision is the ability of the eyes and brain to work together to perceive the world through light. It begins when light enters the eye, passes through the cornea and lens, and focuses on the retina. The retina converts light into electrical signals that travel to the brain through the optic nerve. The brain then interprets these signals to create the images we see. [read more ...](#)
