## **javascript - What does \$ (function () {} ); do? - Stack Overflow**

A function of that nature can be called at any time, anywhere. jQuery (a library built on Javascript) has built in functions that generally required the DOM to be fully rendered before being called.

## **iife - What is the (function () {} ) () construct in JavaScript**

...

Correction suggested by Guffa: The function is executed right after it's created, not after it is parsed. The entire script block is parsed before any code in it is executed. Also, parsing code doesn't automatically mean that it's executed, if for example the IIFE is inside a function then it won't be executed until the function is called.

## **What's the difference between \_\_PRETTY\_FUNCTION\_\_, \_\_FUNCTION\_\_, \_\_func\_\_?**

About \_\_func\_\_: "The identifier \_\_func\_\_ is implicitly declared by the translator as if, immediately following the opening brace of each function definition, the declaration: static const char \_\_func\_\_[] = "function-name"; appeared, where function-name is the name of the lexically-enclosing function. This name is the unadorned name of the ...

## **What is "function\*" in JavaScript? - Stack Overflow**

12 The function\* type looks like it acts as a generator function for processes that can be iterated. C# has a feature like this using "yield return" see 1 and see 2 Essentially this returns each value one by one to whatever is iterating this function, which is why their use case shows it in a foreach style loop.

## **What does (function(\$) {})(jQuery); mean? - Stack Overflow**

(function(doc){ doc.location = '/'; })(document); //This is passed into the function above As for the other questions about the plugins: Type 1: This is not actually a plugin, it's an object passed as a function, as plugins tend to be functions. Type 2: This is again not a plugin as it does not extend the \$fn object. It's just an extension of the jQuery core, although the outcome is the ...

## **Newest 'function' Questions - Stack Overflow**

83 views Azure function shows successful deployment message in vs code but not visible in Azure

functions app I have an Azure function that is working locally, but when I deploy it to an Azure function app using VS Code, it shows deployment completed, however it is not visible in the Azure Function app. This ... python-3.x azure function

## **var functionName = function() {} vs function functionName() {}**

The difference is that functionOne is a function expression and so only defined when that line is reached, whereas functionTwo is a function declaration and is defined as soon as its surrounding function or script is executed (due to hoisting). For example, a function expression:

## **What does the exclamation mark do before the function?**

(function(){}()); Lastly, ! makes the expression return a boolean based on the return value of the function. Usually, an immediately invoked function expression (IIFE) doesn't explicitly return anything, so its return value will be undefined, which leaves us with !undefined which is true. This boolean isn't used.

## **syntax - What does %>% function mean in R? - Stack Overflow**

I have seen the use of %>% (percent greater than percent) function in some packages like dplyr and rvest. What does it mean? Is it a way to write closure blocks in R?

## **How do function pointers in C work? - Stack Overflow**

358 Function pointers in C can be used to perform object-oriented programming in C. For example, the following lines is written in C:
