html - Required attribute HTML5 - Stack Overflow

As ms2ger has pointed out, the required attribute is a boolean attribute, and here's what the HTML

5 spec has to say about those: Note: The values "true" and "false" are not allowed on boolean attributes.

Can I apply the required attribute to fields in HTML?

The required attribute is a boolean attribute. When specified, the user will be required to select a value before submitting the form. If a select element has a required attribute specified, does not have a multiple attribute specified, and has a display size of 1 (do not have SIZE=2 or more - omit it if not needed);

How to use the "required" attribute with a "radio" input field

1024 TL;DR: Set the required attribute for at least one input of the radio group. Setting required for all inputs is more clear, but not necessary (unless dynamically generating radio-buttons). To group radio buttons they must all have the same name value. This allows only one to be selected at a time and applies required to the whole group.

asp.net mvc - How to add "required" attribute to mvc razor viewmodel ...

new { @class = "form-control", placeholder = "short name", required="required"}) or you can use the RequiredAttribute class in .Net. With jQuery the RequiredAttribute can Validate on the front end and server side. If you want to go the MVC route, I'd suggest reading Data annotations MVC3 Required attribute. OR You can get really advanced:
